

**REMARKS/ARGUMENTS**

The inventor acknowledges that even though he has invested great effort in the prior preparation of the filing of this application and its amendments, some minor flaws were encountered and hence is presenting this respectful request for its consideration and inclusion of these amendments in the final form of the current application prior to its publication.

Claim 60 makes reference to itself as opposed to refer to the claim before which is 59. Claim 61, is also intended to refer to claim 59 and these both cases were errors resulting while renumbering when preparing the previous final amendment.

On claims 53 and 54, the reading of each of the claims as a whole and its meaning is better served by striking out the word "the" as indicated in the listing in both said claims since said word would imply a non adequately founded specificity, in view that no identification has been made to which specifically are "the lower level portions" this phrase would be refering to.

Applicant respectfully requests that a timely Notice of Allowance be issued in this case.
